

# VK 103

Best in class air decontamination for communal areas and large indoor spaces.

The **VK 103** is a powerful, free-standing tower unit best suited for large, high traffic areas. It covers areas of up to 100sqm.

The **VK 103** takes control of the airflow in a room. First, it draws contaminated air away from the breathing zone and into the bottom of the unit. The air then passes through the filters and reactor chamber where contaminants are removed, and viruses killed. Sterilized air is then released in four directions from the top of the unit back into the breathing zone of the occupants in the room.

Featuring the same high quality UVC lamps, a powerful, yet silent Siroccofan and an uncompromising set of industrial filters, the **VK 103** is the best **VIRUSKILLER™** solution for total peace of mind in larger spaces and communal areas.

## USE CASES:

- Retail spaces
- Waiting areas
- Queues
- or
- Any room smaller than 100 sqm.
